⚠ Should Fix:

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 7 blocking script resources and 3 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

🟧 Consider Fixing:

Enable compression

Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.

Enable compression for the following resources to reduce their transfer size by 144B (34% reduction).

- Compressing https://megatrans24.ru/wp-content/cache/wmac/js/wmac_single_93d421fd7576b0ca9c359ffe2fa16113.js?ver=20151215 could save 144B (34% reduction).

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Leverage browser caching for the following cacheable resources:

Reduce server response time

In our test, your server responded in 0.58 seconds.

There are many factors that can slow down your server response time. Please read our recommendations to learn how you can monitor and measure where your server is spending the most time.

Optimize images

Properly formatting and compressing images can save many bytes of data.

Optimize the following images to reduce their size by 2.2KiB (12% reduction).

- Compressing https://megatrans24.ru/wp-content/uploads/2018/03/logo-arenda-ekskavatora-v-moskve.jpg could save 1.1KiB (12% reduction).

- Compressing https://megatrans24.ru/wp-content/uploads/2018/11/logo-arenda-traktora-v-moskve.jpg could save 981B (11% reduction).

- Compressing https://informer.yandex.ru/informer/49191037/3_1_FFFFFFFF_EFEFEFFF_0_pageviews could save 240B (18% reduction).

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 37% of the final above-the-fold content could be rendered with the full HTML response.

⚠ Consider Fixing:

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target Манипуляторы and 2 others are close to other tap targets.

- The tap target Все автокраны and 3 others are close to other tap targets.

- The tap target Аренда автокрана 16 тонн and 19 others are close to other tap targets.

- The tap target длинномеры and 1 others are close to other tap targets.
