⚠ Should Fix:

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 12 blocking script resources and 13 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Remove render-blocking JavaScript:

🔸 Consider Fixing:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Leverage browser caching for the following cacheable resources:

- https://www.google-analytics.com/analytics.js (2 hours)

Minify CSS

Compacting CSS code can save many bytes of data and speed up download and parse times.

Minify CSS for the following resources to reduce their size by 3.2KiB (17% reduction).

- Minifying https://sewamobilyogyakarta.com/sas-content/themes/rentalmobiljogja/assets/css/style.css?v=4.8 could save 2.1KiB (16% reduction) after compression.

- Minifying https://sewamobilyogyakarta.com/sas-content/themes/rentalmobiljogja/assets/css/animate.min.css?v=2.6 could save 1KiB (21% reduction) after compression.

Minify HTML

Compacting HTML code, including any inline JavaScript and CSS contained in it, can save many bytes of data and speed up download and parse times.

Minify HTML for the following resources to reduce their size by 1.4KiB (18% reduction).

- Minifying https://sewamobilyogyakarta.com/ could save 1.4KiB (18% reduction) after compression.

Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

Minify JavaScript for the following resources to reduce their size by 1.3KiB (36% reduction).

- Minifying https://sewamobilyogyakarta.com/sas-content/themes/rentalmobiljogja/assets/js/bootstrap-slider.js?v.3.6 could save 784B (29% reduction) after compression.

- Minifying https://sewamobilyogyakarta.com/sas-content/themes/rentalmobiljogja/assets/js/ie-emulation-modes-warning.js could save 549B (52% reduction) after compression.

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 34% of the final above-the-fold content could be rendered with the full HTML response snapshot:25.

🔶 Consider Fixing:

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.
