❗ Should Fix:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Leverage browser caching for the following cacheable resources:

- http://tgrig.ru/css/font-awesome.min.css (expiration not specified)

- http://tgrig.ru/css/style-large.css (expiration not specified)

- http://tgrig.ru/css/style-medium.css (expiration not specified)

- http://tgrig.ru/css/style-small.css (expiration not specified)

- http://tgrig.ru/css/style-xlarge.css (expiration not specified)

- http://tgrig.ru/css/style-xsmall.css (expiration not specified)

Mobile

- http://tgrig.ru/css/style.css (expiration not specified)

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 6 blocking script resources and 8 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

[Remove render-blocking JavaScript]():

- http://tgrig.ru/js/jquery.min.js

- http://tgrig.ru/js/jquery.scrollzer.min.js

- http://tgrig.ru/js/jquery.scrolly.min.js

- http://tgrig.ru/js/skel.min.js

- http://tgrig.ru/js/skel-layers.min.js

- http://tgrig.ru/js/init.js

[Optimize CSS Delivery]() of the following:

- http://tgrig.ru/css/style.css

- http://tgrig.ru/css/style-xlarge.css

- http://tgrig.ru/css/style-large.css

- http://tgrig.ru/css/style-medium.css

- http://tgrig.ru/css/style-small.css

- http://tgrig.ru/css/style-xsmall.css

- http://tgrig.ru/css/font-awesome.min.css

- http://fonts.googleapis.com/css?family=Lato:400,400italic,700,700italic|Source+Code+Pro:400

Optimize images

Mobile

Properly formatting and compressing images can save many bytes of data.

Optimize the following images to reduce their size by 2.5MiB (71% reduction).

- Compressing and resizing http://tgrig.ru/images/tgrig-s1.jpg could save 360KiB (99% reduction).

- Compressing and resizing http://tgrig.ru/images/tgrig-4.jpg could save 359.1KiB (98% reduction).

- Compressing and resizing http://tgrig.ru/images/tgrig-r2.jpg could save 332.1KiB (98% reduction).

- Compressing http://tgrig.ru/images/tgrig-r1.jpg could save 306KiB (70% reduction).

- Compressing http://tgrig.ru/images/tgrig-s2.jpg could save 292.4KiB (66% reduction).

- Compressing http://tgrig.ru/images/tgrig-2.jpg could save 289.4KiB (60% reduction).

- Compressing http://tgrig.ru/images/tgrig-3.jpg could save 285.8KiB (77% reduction).

- Compressing http://tgrig.ru/images/nimfa.jpg could save 133.2KiB (64% reduction).

- Compressing http://tgrig.ru/images/classik.jpg could save 115.5KiB (62% reduction).

- Compressing http://tgrig.ru/images/banner.jpg could save 31.6KiB (17% reduction).

- Compressing http://tgrig.ru/images/romanyic.jpg could save 26KiB (28% reduction).

- Compressing http://tgrig.ru/images/avatar.jpg could save 25.6KiB (36% reduction).

- Compressing http://tgrig.ru/images/princessa.jpg could save 13.1KiB (19% reduction).

🔸 Consider Fixing:

Minify CSS

Compacting CSS code can save many bytes of data and speed up download and parse times.

Minify CSS for the following resources to reduce their size by 1.5KiB (25% reduction).

- Minifying http://tgrig.ru/css/style.css could save 663B (18% reduction) after compression.

- Minifying http://tgrig.ru/css/style-medium.css could save 218B (30% reduction) after

compression.

- Minifying http://tgrig.ru/css/style-small.css could save 212B (34% reduction) after compression.

- Minifying http://tgrig.ru/css/style-xsmall.css could save 163B (37% reduction) after compression.

- Minifying http://tgrig.ru/css/style-xlarge.css could save 141B (48% reduction) after compression.

- Minifying http://tgrig.ru/css/style-large.css could save 131B (55% reduction) after compression.

Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

Minify JavaScript for the following resources to reduce their size by 1.6KiB (15% reduction).

- Minifying http://tgrig.ru/js/skel.min.js could save 1.1KiB (13% reduction) after compression.

- Minifying http://tgrig.ru/js/init.js could save 457B (24% reduction) after compression.

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 63% of the final above-the-fold content could be rendered with the full HTML response.

- Click to see the screenshot with only the HTML response: snapshot:12
